SPIDER EYE

The new Dragon Delta Spider-eye, with both high and low beams, brings state of the art technology to a trusted design. 18 individual L.E.D.s produce an intense beam of bright white light, equivalent to 135,000 candle power. This power, combined with our ultra-white technology, blows standard halogen bulbs out of the water. L.E.D.s draw considerably less power than halogen bulbs, meaning the new Dragon Delta Spider-eye lasts for up to two and a half hours on high beam and five hours on low, no mean feat for such a powerful searchlight.

WIDE EYE

The Dragon Delta Wide-eye L.E.D. is a fantastic addition to our searchlight family. Based on the Dragon Delta Spider-eye L.E.D., the Dragon Delta Wide-eye L.E.D. is fitted with a wide angled array dispersing light evenly in front of you. With dual power settings and 18 individual L.E.D.s boasting ultra-white technology, the Wide-eye would make a great addition to your lighting arsenal. The Wide-eye and Spider-eye work fantastically, both independantly and together, allowing you to tailor exactly what light you need for every job.

Building on the huge success of the Dragon Max Classic, the Dragon Max L.E.D. brings brand new technology to a trusted design. By replacing the fluorescent lighting unit with an array of 120 ultra-bright CREE® L.E.D.s, the Dragon Max L.E.D. will illuminate even the darkest of areas.

Additionally, because of the reduced power requirements, the Dragon Max L.E.D. will run for up to 8 hours, almost two shifts. Weight is also reduced by 1Kg. and charge time reduced to 7 hours.

All accessories from classic models are fully compatible with the new LED range of lights.
